

Prevention of Pests in Food Establishments

Rats and cockroaches are pests commonly found in food establishments.

Where are they commonly found?

Rats

Cluttered areas

Underneath/back of bulky appliances (e.g chest freezers)

False ceiling/walls

Cockroaches

Crevices of wall

Gaps (e.g. rice buckets cover/handles, chiller/freezer gasket)

Underneath fixtures (e.g. table, cabinet, sink, etc.)

How to prevent?

Eliminate food sources and potential harbour areas for pests by adopting good cleaning and housekeeping practices.

Rodent proof your food establishment and seal entry points for pests.

Engage a pest control operator to carry out regular pest control services and step-up frequencies of treatment when required.
